## DETAILED ACTION

1. In response to the Office action dated April 5, 2005 the Amendment has been received on August 31, 2004.

Claims 1-18, 21 and 22 have been canceled.

Claims 23-29 have been newly added.

Claims 19,20 and 23-29 are currently pending in this application.

### ***Allowable Subject Matter***

2. Claims 19, 20 and 23-29 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claims 19 and 20 are allowed because prior art fails to teach or make obvious an X-ray computer tomography apparatus, comprising: a pixel number comparing unit configured to keep comparing the number of pixels obtained by a pixel number measuring unit with the threshold value of the number of pixels set by a threshold setting unit and to generating an instruction signal for stopping X-ray irradiation when both substantially agree as claimed in combination with all elements of claim 19. Claim 20 is allowed by virtue of its dependence.

Claims 23, 24 and 25 are allowed because prior art fails to teach or make obvious an X-ray computer tomography apparatus, comprising an irradiation condition setting unit configured to set irradiation conditions for first scanning under the first

irradiation condition, second scanning under the second irradiation condition, and third scanning under the first irradiation condition during generation of the second image data as claimed in combination with all elements of claims 23 or 24 respectively. Claim 25 is allowed by virtue of its dependence.

Claims 26 and 27 are allowed because prior art fails to teach or make obvious an X-ray computer tomography apparatus, comprising a ROI setting unit configured to attach an identifiable index to the region of interest in at least one of blood vessels at which a contrast medium arrives earliest and latest, respectively as claimed in combination with all elements of claim 26. Claim 27 is allowed by virtue of its dependence.

Claim 28 is allowed because prior art fails to teach or make obvious an X-ray computer tomography apparatus, comprising a ROI setting unit configured to attach an identifiable index to the region of interest in at least one of blood vessels at which a contrast medium arrives earliest and latest, respectively as claimed in combination with all elements of claim 28.

Claim 29 is allowed because prior art fails to teach or make obvious an X-ray computer tomography apparatus, comprising a threshold setting unit configured to set threshold values for CT values; and a CT value comparing unit configured to keep comparing CT values obtained by the CT value calculating unit with the threshold values set by the threshold setting unit and to generate an instruction signal for stopping X-ray irradiation when both substantially agree as claimed in combination with all elements of claim 29.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Majima et al. (US Patent 6,198,797 B1), Shinohara et al. (US Patent 6,188,744 B1), Ozaki (US Patent 5,987,093), Ohishi (US Patent 6,845,142 B2), (US Patent 6,363,134 B1) and Saito et al (US Patent 6,826,297 B2) teach generating images for region of interest by means of CT value and set threshold value in x-ray computer tomography.
